

Simple Data Backup

Celebrant Assist has a program function to do a data backup, by date, but this is not much good if your computer crashes and you lose your backups along with your data.

This is a simple way to backup your data, using a memory stick. A good habit to have, is to copy your data on to your memory stick after each session, then take the memory stick out and put it somewhere safe, away from your computer.

This is how you do it:

1. Right Click on the "Start" button at the bottom left hand of the screen.
2. Click on Explore.
3. Open out the list of folders to "C:\Program Files\Celebrant Assist\db"

4. Right-Click on CELA.data.1.02.Cad, Click Copy.
5. Open up your memory stick and optionally select a folder to save it in.

6. Right click, Save.

To restore your data, reverse the above process.

You can make this process simpler by creating a short cut to the database folder on your desktop, from which you can open the folder drag the data file onto your memory Stick.
